Note: The "#" characters in the version column represent parts of the version code which do not impact the tires that may be fitted to a particular vehicle.

We hereby confirm that each type of rim mentioned above carries 50% of the maximum permissible axle mass (front or rear axle).

Fitment of the Continental Sport Contact 5 tire requires the maximum permissible rear axle mass to be limited to 1420 kg and a maximum vehicle speed of 240 km/h for versions which would otherwise be allowed to reach 250 km/h.

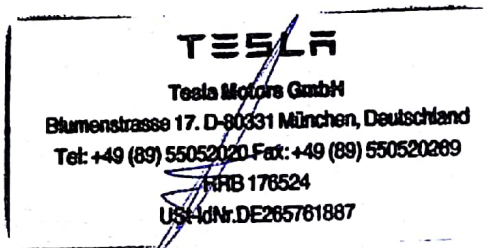

Similarly, fitment of the Michelin Pilot Sport 2 tires requires the maximum permissible axle masses to be limited to the following values:

60R and 85R variants:	Front axle	-	1235 kg
	Rear axle	-	1420 kg
70R variants:	Front axle	-	1276 kg
	Rear axle	-	1420 kg
85D and 90D variants, P## version:	Front axle	-	1250 kg
	Rear axle	-	1420 kg

Sincerely,

Suraj Nagaraj  
Director – Vehicle Homologation
